

**REMOVAL OF EXISTING STRUCTURE AND BRIDGE  
FAILURE DETECTION DEVICE AT STATION**

---

**(10-12-01)**

Remove the existing structure in accordance with the Standard Specifications with the exception of the Bridge Failure Detection Equipment. Remove the Bridge Failure Detection Equipment as directed below.

The existing structure is protected in case of failure by bridge failure detection and/or signal equipment.

Remove and salvage this equipment for the Division of Highways as directed. Pile the equipment neatly on the right of way at locations as directed.

This equipment generally consists of, but is not limited to, signal displays, span wire, controllers, cabinets, poles and conduits which are part of the bridge failure device and/or signalization. Do not use any of this equipment, either temporarily or permanently.

Remove the equipment carefully without damage.

Do not render the failure detection and/or signal system inoperative until traffic is removed from the existing structure and routed over the proposed structure.

The lump sum price bid for “Removal of Existing Structure at Station \_\_\_\_\_” will be full compensation for the above work.
